UBA
2008 - 2012

LANGUAGES

English: Intermediate / Advanced

Spanish: Native

TOOLS

Figma (Advanced), Figma Make

Confluence, Jira

Claude Code, Cursor

HTML, CSS, JavaScript (basic)

Adobe Illustrator, Photoshop

PROFESSIONAL PROFILE

Product Designer with a Design Ops and Design Systems background, now specializing in UX Engineering. I've designed enterprise platforms for real-time AI translation and contact center environments, with integrations into Genesys Cloud and NICE CXone. Most of my work sits at the handoff point: technical documentation, component standardization, and functional solutions that product and development teams can actually build from. I prototype and validate flows in code when needed, using AI-assisted workflows like Claude Code to close the gap between what's designed and what ships.

PROFESSIONAL EXPERIENCE

UX/UI Specialist (Contract)

OneMeta AI, August 2022 to Present

Product Design + Design Ops for Verbum Local, Verbum Call, VerbumAgentis, and Verbum SDK, enterprise real-time AI translation platforms for contact centers integrated with Genesys Cloud and NICE CXone.

KEY RESPONSIBILITIES

- Definition, maintenance, and evolution of UI components, patterns, and design-system libraries: variants, tokens, grids, guidelines.
- Advanced technical documentation: dev notes, usage rules, microcopy, accessibility, nomenclature, and states.
- Design of functional flows and technical research for integrations and advanced platform settings (multi-regional configurations, routing, content governance, authentication).
- Strategic documentation for product and development: problem statements, technical analysis, proposals, risks.

VERBUM LOCAL: DESIGN-TO-CODE PROTOTYPE

- Designed and built, in code, an interactive front-end prototype of the admin platform (React, TypeScript, shadcn/ui): 26 pull requests reviewed and merged into the shared codebase alongside engineering.
- Defined the role and tenant architecture (Super Admin, Admin, Supervisor, Agent across a 3-level hierarchy) and translated it into an RBAC matrix and mock data model.
- Documented 40+ use cases (MVP vs. Phase II), 12 user flows, and page-level specs with versioning and acceptance criteria.
- Designed and built HIPAA-compliance tooling (audit log viewer, retention policy controls) and custom language-model assignment for Supervisor and Super Admin.
- Set up an AI-assisted workflow with Claude Code (per-project context files, spec-first prompts, and a custom set of commands for specs, design critiques, and research) to keep implementation consistent with specs and the design system.

VERBUM CALL: LIVE MONITORING & SAFETY-CRITICAL UX

- Designed and built the Telemetry Console end to end (live call monitoring, quality trends, health signals, search/filters): 8+ commits over three weeks, deployed live through a Cloudflare pipeline I set up myself.
- Designed and coded an Active PII Verification Loop for Hairpin (real-time agent view), reusing production components to confirm a caller's address or phone before it reaches the agent; the language auto-detection flow from the same spec was later built into production by the engineering team.

ACHIEVEMENTS

- Standardization of the visual and operational system, reducing inconsistencies and accelerating development.
- Technical documentation adopted as an internal reference by product, development, and operations teams.

Design Project Manager

Three Design (freelance, part-time), 2021 to 2025

- Coordinated design and 3D projects end to end: client research, planning, and delivery tracking.
- Handled quality control and coordination with a partner designer.

SKILLS

Information Architecture · Design Governance · Design Systems · UX/UI Documentation · Technical UX Writing · Functional/Technical Research · AI-Assisted Workflows · Enterprise UX Design
